

Two Models of Agency

Agency as blameworthiness: predicts retributivists higher

Agency as benevolence: predicts retributivists no higher

Retributivists (ranked retribution first, $n = 371$) vs deterrence- or incapacitation-first ($n = 453$). Positive d : retributivists higher. The seven contrasts are preregistered (H13, H16, H17, H19); only this comparison group and the two-model grouping are not.
